## Where to Buy the Best Drupal Hosting?

Wed, 03/26/2008 - 15:49 — themegarden

There are many of you looking to buy the best quality Drupal shared hosting or the best quality Drupal hosting of some other [web hosting type](#). If you are still reading this, you might be the one. What actually are you looking for? We will try to help you to choose among the top quality Drupal web hosting providers and make you satisfied with your choice. Why don't we just say "The best Drupal hosting is such-and-such"? Because, the best Drupal hosting is not the same for everyone. How is that? It would be the same as if you are looking to buy the best vehicle, or even better, to buy the best computer. If you are lucky enough, or better informed, and you know, for example, that you need not just any type of Drupal hosting, but you need shared Drupal hosting? In that case you know that you need not just any vehicle (or computer), but you need a car (or personal computer – PC). This metaphor should illustrate how complex this question is.

Below is the table with selected web hosting providers. The table compares the shared hosting plans (shared hosting packages), which support the Drupal CMS.

## Drupal 6 Themes at Drupal Theme Garden

Mon, 03/10/2008 - 11:43 — themegarden

Drupal 6 is released. Some of existing Drupal web sites are upgrading to new Drupal 6 version (Drupal 6.1 is actual release), but others are still not. Many new Drupal sites are released on Drupal 6, but some others are still being released under the Drupal 5 (Drupal 5 latest release is Drupal 5.7). One of the main reasons why all Drupal sites are not upgraded or released under Drupal 6 are themes. This, of course, does not apply to the Drupal sites based on professional custom designed Drupal themes. The lack of Drupal 6 themes will not last for a long time. So far, few dozens of Drupal 6 themes are released already. We would like to give thanks to all those who already contributed the Drupal 6 themes, and to invite all other Drupal theme developers to contribute their GPL Drupal 6 themes to the Drupal community. We also invite all Drupal theme developers who maintain Drupal 5 themes (or Drupal 4.7 themes) to port the existing designs to Drupal 6.

# Miért?

# Miért épp az adott modult?

- Alaprendszer-beli (core) modulok
  - Szigorúan ellenőrzöttek
  - Biztonságosak
  - Fejlesztettek, karbantartottak
- Kiegészítő, közösségi (contributed) modulok
  - **Nincs szigorú ellenőrzés!** (De azért bárki nem kap CVS hozzáférést...)
  - Biztonságos?
  - Hatékony?
  - Aktív? (Fejlesztik, karbantartják?)

# Miért épp az adott modult?

- Sokoldalú, általános modul?  
*Pl. Rules*
- Egy-egy feladat megoldását szolgáló modul?  
*Pl. Scheduler*

A szituációtól függ. Szerintem:

- Kevés egyszerű feladatra inkább célmodulok
- Összetett rendszerekhez inkább általános, együttműködő modulok

OK so you want a simple map block (or embedded map) on your page without the overhead of setting up GMAP module, cck, a content type for your location and a view?

Simplemap is a Drupal module which makes the addition of simple static map blocks as straightforward as adding a normal block.

It is designed to work in harmony with the GMAP module so you can utilise the true power of the gmap for all your dynamic maps whilst using simplemaps lighting fast point and click approach all your contact details type pages.

It allows themers to set images all or individual markers within the theme folder.

It also has a filter so you can embed your maps inline using `[simplemap id='MAPID' class='MYEXTRACLASS']`
